ShareCreate schema

Create a new schema

A schema is the second layer of Unity Catalog's three-level namespace and is used to organize tables, views, volumes and other objects. [Learn more](#)

Schema name*

Storage location

Cloud storage location used for managed tables and volumes in this catalog. If not specified, it defaults to the metastore root location.

Select external location sub/path

[Create a new external location](#)

Access requests

Requests will be sent to lovemaths404@gmail.com. This can be configured after creation.

External Locations

Create a new external location

An external location allows you to access your data stored in cloud storage (e.g. Azure Data Lake Storage). You will need the cloud storage path and a paired credential (e.g. managed identity) which gives access to that path

External location name*

ext_location_sales

Storage type*

Azure Data Lake Storage

URL*

Enter the bucket path that you want to use as the external location. Note: This must be an ADLS Gen2 storage account with a hierarchical namespace

abfss://raw@demostrgacnt.dfs.core.windows.net/sales

Storage credential*

Learn more

Provide a storage credential capable of accessing the URL

AI Suggested Description

This table contains records of gold product sales, including details such as the product sold, the sales region, quantity, sales amount, sale date, and sales category. It can be used to analyze sales performance over time, compare sales across different regions or product categories, and support revenue and inventory reporting.
