

- Create queries to connect to all .csv files in the folder into power query
- Confirm that column headers have been promoted and that all data types are correct
- Add a new column to extract all characters before the dash (""-"") in the Product SKU column, and name it “SKU Type”
- Update the SKU Type calculation above to return all characters before second dash
- Replace zeros (0) in the Product Style column with “NA”

Column profiling based on top 1000 rows

PREVIEW DOWNLOADED AT 11:29

a) Implement text transformations

- Duplicate the email address column and name it “Domain Name”
- In the new column, remove all text/characters except for the domain name
- Use transformation steps to clean up and capitalize the domain names (i.e. “Adventure Works”)

c) Date Transformations

- Create a calendar table using M language
- Create new columns for the below fields
- Add the following columns to the calendar table:
- Month Name (e.g. "January")
- Month Number (e.g. "1")
- Start of Year (e.g. "1/1/2020")
- Year (e.g. "2020")
